

Journey Finder - Casos de Prueba

Objetivo

Este documento describe los casos de prueba para la API **Journey Finder**, que permite buscar vuelos y viajes combinando eventos de vuelo. Los tests están diseñados para validar que la API devuelve los vuelos correctos según la fecha, origen y destino.

Alcance

- Validar la búsqueda de vuelos directos y con 1 conexión.
- Validar que los filtros de fecha, origen y destino funcionan correctamente.
- Asegurar que no se devuelvan vuelos fuera de la fecha seleccionada.

Requisitos Previos

- Tener las APIs corriendo en <http://127.0.0.1:8000> y <http://127.0.0.1:8001>
- Conocer los códigos IATA de los aeropuertos de prueba.
